

## **How to install Presets Lightroom**

- 1.** First, download the zip files containing the Lightroom settings.
- 2.** After downloading the zip files, you should unpack them before installing the presets.

In Windows, right-click and select "Extract All."

On a Mac, you can simply double-click the zip file to unpack it.

- 3.** To install presets, open Lightroom and make sure you are on the Develop screen.

On the left side of the screen, in the list of presets, right-click "User settings" and select "Import".

Go to the place where you saved the unpacked settings, select them, then click "Open".

### **Alternative installation method**

On Windows: after unpacking files. Select them and then drag and drop in the following place on the computer:

C: \ Users \ [username] \ AppData \ Roaming \ Adobe \ Lightroom \ Develop Presets

Then restart Lightroom and it will be installed.

For a Mac: select the unpacked files and then drag and drop them here: / Library / Application Support / Adobe / Lightroom / Develop Presets

Start Lightroom
